

ReliableTech

Your Monthly Source of Trustworthy Tech Insights

Welcome!

An extra big welcome, in fact, to the first edition of Reliable Tech: your trusted companion for your digital journey. In each edition – delivered monthly to your inbox – you'll find a mix of news, insights, opinions, advice, and tips to help you embrace technology with confidence. Whether you want to improve your cybersecurity posture, build more efficient processes, or keep up-to-date on the latest trends from the tech sector, we've got you covered. We're kicking things off with security and productivity.

Working Productively in the Online Space

As the talent shortage continues, and workloads get larger, productivity is becoming a concern. But what many don't realise is that you don't have to face tasks alone. Technology is here to help. A great example is Microsoft's Copilot, which acts as your own virtual assistant, helping you get stuff done.

Copilot is shaping up to be a game-changer, offering executives a valuable helping hand exactly when they need it. It steps in to handle

workplace tasks, giving execs the support they need while freeing up assistants to tackle more.

Benefits of Microsoft Copilot

- Enhances efficiency
- Boosts productivity
- Fosters innovative thinking
- Improves communication

Want to know more about the benefits of CoPilot?

We are hosting an event with Microsoft in March.

Did you know...

Digital security and productivity are very closely related. When you're working securely, you're less likely to experience downtime due to security incidents, allowing you to work with greater efficiency.

Are Your 'Twin Pillars' As Strong As They Could Be?

We're living in a world where everything is 'going digital'. And that means businesses really need to be focusing on two important things: getting stuff done online, and keeping everything safe. Productivity and security are the 'twin pillars' supporting every organisation in the digital era, but what happens if those pillars aren't strong enough? If there are weaknesses, they could crack. But you don't have to sit and watch them fall. You can take charge, strengthening your foundations.

Keeping Your Business Secure

One option for boosting digital security without building an entire team is to consider SOC as a Service. This allows businesses to reap the rewards of a complete security operations centre (SOC) without the hassle of in-house management.

Inspirational quote of the month

"Done is better than perfect" – Sheryl Sandberg, founder of Lean In and Option B, ex-COO of Meta

Why we love it:

it shows that even small changes can have a big impact on your digital posture.

Top Tech Tips

1. Use MFA

Despite best password practices, credentials can still be stolen, shared, or leaked. Two-factor authentication, or 2FA, requires users to verify their identity in two distinct ways when logging into accounts. This means that, should cyber criminals gain access to login credentials, they will not be able to access confidential information without another form of authentication, such as a one-time code sent via email. Many apps now offer this, so make use of it wherever you can.

2. Stay informed

The technology landscape is constantly changing, and what's true today might not be true tomorrow. Anyone who utilises technology – or is interested in tech – should be ensuring they're staying on top of all the latest news and insights from across the technology sector. This can help businesses remain safe, secure, and productive, as processes will be shaped by the most recent developments. Keep your eye on the Reliable Tech newsletter for your monthly helping of news.
