

The Benefits of Using Power Platform to Streamline Business Operations

Reliable

Microsoft Power Platform is a collection of tools built to enhance Office 365: PowerBI, PowerApps and Flow. This powerful Collection of services allows users to create apps, visualise data, and automate processes. It's a huge time-saver, and if you're used to paying separately for third-party productivity tools, it could also save you money.

Here's what you need to know about Microsoft Power Platform:

- **Power Platform is a suite of tools that can help organisations automate tasks, analyse data, and build custom applications.** These tools are easy to use and can be used by people with no coding experience.
- **Power Platform is cloud-based, so it can be accessed from anywhere.** This makes it a good option for organisations with remote workers.
- **Power Platform is affordable and scalable.** Organisations only pay for the features they need, and the platform can be scaled up or down as needed.
- **Power Platform is secure.** It uses the same security features as Microsoft's other cloud-based products.

There's a growing need for business solutions to be built and customised quickly, and Microsoft lets you do just that with Power Platform. You can also connect 200+ data sources for visualisation, including Microsoft Dynamics, Azure SQL, and social media sources like Instagram and Facebook.

Different environments can be created to contain and manage apps, workflows, and permissions. With multiple types of customisable environments available, here are some examples of how Power Platform could be used in your organisation...

Automate tasks: Power Automate can be used to automate a wide variety of activities, including writing emails, managing social media accounts, and updating spreadsheets. This can free up employees to focus on more strategic work.

Analyse data: Power BI can be used to analyse data from a variety of sources, such as sales data, customer feedback, and social media data. This information can be used to make better decisions about business operations.

Build custom applications: Power Apps can be used to build custom applications that meet the specific needs of an organisation. These applications can be used to automate tasks, manage data, and improve communication.

Reliable

With the right setup, Power Platform is a set of tools that can really accelerate the productivity of organisations, without compromising on security.
